NEW QUESTION: 1

A large hospital has implemented BYOD to allow doctors and specialists the ability to access patient medical records on their tablets. The doctors and specialists access patient records over the hospital's guest WiFi network which is isolated from the internal network with appropriate security controls. The patient records management system can be accessed from the guest network and require two factor authentication. Using a remote desktop type interface, the doctors and specialists can interact with the hospital's system. Cut and paste and printing functions are disabled to prevent the copying of data to BYOD devices. Which of the following are of MOST concern? (Select TWO).

- A. Privacy could be compromised as patient records can be viewed in uncontrolled areas.
- B. Device encryption has not been enabled and will result in a greater likelihood of data loss.
- C. Malware may be on BYOD devices which can extract data via key logging and screen scrapes.
- D. The guest WiFi may be exploited allowing non-authorized individuals access to confidential patient data.
- E. Remote wiping of devices should be enabled to ensure any

lost device is rendered inoperable.

Answer: A,C

Explanation:

Explanation

Privacy could be compromised because patient records can be from a doctor's personal device. This can then be shown to persons not authorized to view this information. Similarly, the doctor's personal device could have malware on it.

NEW QUESTION: 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this scenario, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure SQL database named DB1 that contains a table named Table1. Table1 has a field named Customer_ID that is varchar(22).

You need to implement masking for the Customer_ID field to meet the following requirements:

- * The first two prefix characters must be exposed.
- * The last four prefix characters must be exposed.

All other characters must be masked.

Solution: You implement data masking and use a credit card function mask.

Does this meet the goal?

- A.** Yes
- B.** No

Answer: B

Explanation:

Must use Custom Text data masking, which exposes the first and last characters and adds a custom padding string in the middle.
