Khimunin MS-101 Dumps - Microsoft 365 Mobility and Security So that you can get the career you want, and can achieve your dreams.

NEW QUESTION: 1

A. Session state
B. Database storage
C. Profile properties
D. Application state
Answer: A
Explanation:
ASP.NET session state enables you to store and retrieve values for a user as the user navigates ASP.NET pages in a Web application. HTTP is a stateless protocol. This means that a Web server treats each HTTP request for a page as an independent request. The server retains no knowledge of variable values that were used during previous requests.

ASP.NET session state identifies requests from the same browser during a limited time window as a session, and provides a way to persist variable values for the duration of that session.
