**Answer: D**

**NEW QUESTION: 2**

Your manager needs to view a collection of data records and a chart of the data records simultaneously.

What should you instruct the manager to do?

A. Export the Fetch XML, and then import a chart.

B. Define a view and add a chart.

C. Run the Report Wizard.

D. Create a personal report.

**Answer: C**

Explanation:

Explanation/Reference:

Explanation

When Select the basic format of the report.

Table only. This provides a table grouped and sorted as you specified.

Chart and table. Displays both a chart and table.

Show table below the chart on same page. Selecting the chart does nothing.

Show chart. To view data for a chart region, click the chart region. Selecting an area in the chart will

display a table with details for that section of the chart. going through the Report Wizard you will give the following choice:

**NEW QUESTION: 3**

Ace Consulting, a multinational corporate finance consulting firm, is performing an analysis of the East Asian distribution network of Smith, Kleen, and Beetchnutty. Specifically, Ace Consulting is trying to identify the effect of changes in specific variables on the overall efficiency of SKB's distribution process. In their analysis, Ace Consulting identified a "base case" situation using the expected values for each input.

Then, Ace modified each variable a few points above and below the base case, holding other variables constant. This was done in an effort to determine the effect of each variable on the overall efficiency of SKB's distribution process. Which of the following choices correctly describes this stand-alone risk measurement technique?

- A. Scenario analysis
- B. Relational analysis
- C. Sensitivity analysis
- D. Case study analysis
- E. Monte Carlo simulation
- F. Regression analysis

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

In this example, Ace consulting has been conducting a sensitivity analysis. This analysis begins with the identification of a "base case" situation using expected values for each input. Then, a variable is manipulated holding the other variables constant, in an effort to determine the sensitivity of the output to manipulations in each variable. Sensitivity analysis is the most widely used technique for measuring stand-alone risk, and can be performed relatively easily using a commercially available spreadsheet package such as Microsoft Excel.

#### **NEW QUESTION: 4**

Which benefit is realized by using a fabric extender?

- A. reduced routing complexity
- B. improved data rates
- C. cut-through local, nonblocking switching
- D. central control and management by its parent switch

**Answer: D**

Explanation:

Section: (none)
