**D.** NONE
**E.** SECURE
**Answer: A,D**

**NEW QUESTION: 2**
Examine the output of the 'diagnose sys session list expectation' command shown in the exhibit; than answer the question below.

Which statement is true regarding the session in the exhibit?
**A.** It was created by the FortiGate kernel to allow push updates from FotiGuard.
**B.** It was created by a session helper or ALG.
**C.** It is for traffic originated from the FortiGate.
**D.** It is for management traffic terminating at the FortiGate.
**Answer: A**

**NEW QUESTION: 3**
You have virtual machines (VMs) that run a mission-critical application.
You need to ensure that the VMs never experience down time.
What should you recommend? To answer, drag the appropriate solutions to the correct scenarios. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

**Answer:**
Explanation:

Explanation

Box 1: Scale set
A virtual machine scale set allows you to deploy and manage a set of identical, autoscaling virtual machines.
Box 2: Availability Set
An Availability Set is a logical grouping capability for isolating VM resources from each other when they're deployed. Azure makes sure that the VMs you place within an Availability Set run across multiple physical servers, compute racks, storage units, and network switches. If a hardware or software failure happens, only a subset of your VMs are impacted and your overall solution stays operational. Availability Sets are essential for building reliable cloud solutions.
Box 3: Fault domain
A fault domain is a logical group of underlying hardware that share a common power source and network switch, similar to a rack within an on-premises datacenter. As you create VMs within an availability set, the Azure platform automatically distributes your VMs across these fault domains. This approach limits the impact of potential physical hardware failures, network outages, or power interruptions.

**NEW QUESTION: 4**
You have a Microsoft Exchange Server 2019 organization.
You have the Address Book Policies (ABP) and address lists in the following table.

You have the users in the following table.

You assign ABP1 to User1 and User2.
User3 is NOT assigned to an Address Book Policy.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

**Answer:**
Explanation:

Explanation:
