NEW QUESTION: 3

Ferris Plastics, Inc. is a medium sized company, with an enterprise network (access, distribution and core switches) that provides LAN connectivity from user PCs to corporate servers. The distribution switches are configured to use HSRP to provide a high availability solution.

* DSW1 -primary device for VLAN 101 VLAN 102 and VLAN 105

* DSW2 - primary device for VLAN 103 and VLAN 104

* A failure of GigabitEthernet1/0/1 on primary device should cause the primary device to release its status as the primary device, unless GigabitEthernet1/0/1 on backup device has also failed.

Troubleshooting has identified several issues. Currently all interfaces are up. Using the running configurations and show commands, you have been asked to investigate and respond to the following question.

All interfaces are active. DSW2 has not become the active device for the VLAN 103 HSRP group. As related to the VLAN 103 HSRP group, what can be done to make the group function properly?

A. On DSW2, increase the decrement value in the track command to a value greater than 10 and less than 50.

B. On DSW2, increase the priority value to a value greater 200

and less than 250.

C. On DSW1, decrease the priority value to a value less than 190 and greater than 150.

D. On DSW1, disable preempt.

Answer: B

Explanation:

The reason DSW2 has not become the active switch for Vlan103 is because the priority value of DSW1 is higher than that of DSW2. In order to make DSW2 become the active switch, we need to increase DSW2's priority (to higher than 200) or decrease DSW1's priority (to lower than 190) -> B and C are correct. But there is another requirement from this question that "A failure on gig1/0/1 on primary device should cause the primary device to release its status as the primary device, unless GigabitEthernet 1/0/1 on backup device has also failed". This requirement makes answer B incorrect. For example, we choose to decrease the priority value on DSW1 to 160 (according to answer B) then DSW2 will become active switch (that is good). When Gil/0/1 on DSW2 goes down, the priority of DSW2 will be $190 - 50 = 140$ <

160 -> DSW1 will become new active switch (it is good, too). But when Gil/0/1 on DSW1 also goes down, the priority of DSW1 will be $160 - 10 = 150$ and it is still greater than 140 of DSW2 -> DSW2 cannot retake the active role as the requirement of this question.

NEW QUESTION: 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active Directory domain named contoso.com. The domain contains a single site named Site1. All computers are in Site1.

The Group Policy objects (GPOs) for the domain are configured as shown in the exhibit. (Click the Exhibit button.)

The relevant users and client computer in the domain are configured as shown in the following table.

End of repeated scenario.

Which five GPOs will apply to User1 in sequence when the user signs in to Computer1? To answer, move the appropriate GPOs from the list to the answer area and arrange them in the correct order.
