NEW QUESTION: 3
In the 1970s, the idea of building so called "New Towns" to
absorb growth was considered a potential cure- all for urban
problems in the United States. It was assumed that by diverting

residents from existing centers, current urban problems would at least get no worse. It was also assumed that, since European New Towns had been financially and socially successful, the same could be expected in the United States.

In the end, these ill-considered projects actually weakened U.S. cities further by drawing away high- income citizens. While industry and commerce sought in turn to escape, the lower-income groups left behind were unable to provide the necessary tax base to support the cities. Not surprisingly, development occurred in areas where land was cheap and construction profitable rather than where New Towns were genuinely needed. Moreover, the failure on the part of planners and federal legislators to consider social needs resulted not in the sort of successful New Towns seen in Britain but in nothing more than sprawling suburbs.

The passage states that New Towns n the United States

A. provided affluent urban residents an escape from the city

B. provided a thriving social center away from the problems of the older city

C. were different than those in Great Britain in certain important respects

D. provided models for many of today's urban redevelopment projects

E. spurred economic redevelopment in decaying urban centers

Answer: A

Explanation:

In the second paragraph, the author states that one of the effects of New Towns was to draw away high- income citizens away from the cities - essentially what choice C indicates.
