**Answer: A**

Explanation:

Yes, you can configure more than one load balancer with an autoscaling group. Auto Scaling integrates with Elastic Load Balancing to enable you to attach one or more load balancers to an existing Auto Scaling group. After you attach the load balancer, it automatically registers the instances in the group and distributes incoming traffic across the instances.

Explanation:

To enable the Enforce rules enforcement setting by using the Local Security Policy snap-in

1. Click Start, type secpol.msc in the Search programs and files box, and then press ENTER.

2. If the User Account Control dialog box appears, confirm that the action it displays is what you want, and then click Yes.

3. In the console tree, double-click Application Control Policies, right-click AppLocker, and then click Properties.

4. On the Enforcement tab, select the Configured check box for the rule collection that you want to enforce, and then verify that Enforce rules is selected in the list for that rule collection.

5. Repeat step 4 to configure the enforcement setting to Enforce rules for additional rule collections.

6. Click OK.

You should apply an application control policy for executable rules. When AppLocker

policies from various GPOs are merged, both the rules and the enforcement modes are

merged. The most similar Group Policy setting is used for the enforcement mode, and all

rules from linked GPOs are applied.
