- D. Option C

Answer: C

NEW QUESTION: 3

You have an SQL Server 2016 server named SQL1.
You are designing a performance monitoring solution.
You need to monitor the following events on SQL1:

- * A deadlock graph
- * Missing column statistics
- * CPU performance statistics
- * A batch of completed Transact-SQL statements

Which two tools should you use? Each correct answer presents a complete solution.

- A. SQL Server Profiler
- B. Database Engine Tuning Advisor
- C. Activity Monitor
- D. Data Profile Viewer
- E. dynamic management views

Answer: A,B

Explanation:

B: Database Engine Tuning Advisor examines how queries are processed in the databases you specify.

When you run a Profiler Trace and feed it to the Database Engine Tuning Advisor, it also looks for missing column statistics, and it can automatically create them for you.

C: Use SQL Server Profiler to identify the cause of a deadlock. A deadlock occurs when there is a cyclic dependency between two or more threads, or processes, for some set of resources within SQL Server. Using SQL Server Profiler, you can create a trace that records, replays, and displays deadlock events for analysis.
