NEW QUESTION: 2

Azure AD (Azure Active Directory) is a cloud-based directory service that provides a secure and scalable way to manage users and resources in your organization. It is a part of the Microsoft Azure ecosystem and is used to manage access to various applications and services. Azure AD is a cloud-based directory service that provides a secure and scalable way to manage users and resources in your organization. It is a part of the Microsoft Azure ecosystem and is used to manage access to various applications and services.

- A. Azure AD is a cloud-based directory service that provides a secure and scalable way to manage users and resources in your organization. It is a part of the Microsoft Azure ecosystem and is used to manage access to various applications and services.
- B. Azure AD is a cloud-based directory service that provides a secure and scalable way to manage users and resources in your organization. It is a part of the Microsoft Azure ecosystem and is used to manage access to various applications and services.
- C. Azure Portal is a web-based management console for Azure resources. It provides a central location for managing your Azure subscriptions, resources, and services. It is used to create, configure, and manage Azure resources.
- D. Azure Portal is a web-based management console for Azure resources. It provides a central location for managing your Azure subscriptions, resources, and services. It is used to create, configure, and manage Azure resources.

Answer: C

Explanation:

Explanation

There are two types of controls:

- * Grant controls - To gate access
- * Session controls - To restrict access to a session

Grant controls oversee whether a user can complete authentication and reach the resource that they're attempting to sign-in to. If you have multiple controls selected, you can configure whether all of them are required when your policy is processed. The current implementation of Azure Active Directory enables you to set the following grant control requirements:
