Answer: C

NEW QUESTION: 4
A company wants to use Cloudtrail for logging all API activity.
They want to segregate the logging of data events and
management events. How can this be achieved? Choose 2 answers
from the options given below Please select:
A. Create one trail that logs data events to an S3 bucket
B. Create another trail that logs management events to another
S3 bucket
C. Create another Cloudtrail log group for management events
D. Create one Cloudtrail log group for data events
Answer: A,B
Explanation:
Explanation
The AWS Documentation mentions the following
You can configure multiple trails differently so that the
trails process and log only the events that you specify.
For example, one trail can log read-only data and management
events, so that all read-only events are delivered to one S3
bucket. Another trail can log only write-only data and
management events, so that all write-only events are delivered
to a separate S3 bucket Options A and D are invalid because you
have to create a trail and not a log group For more information
on managing events with cloudtrail, please visit the following
URL:
https://docs.aws.amazon.com/awscloudtrail/latest/userguide/loHE
ing-manasement-and-data-events-with-cloudtra The correct
answers are: Create one trail that logs data events to an S3
bucket. Create another trail that logs management events to

another S3 bucket Submit your Feedback/Queries to our Experts
