- C. IP CEF is disabled on the local router.
- D. The dynamic routing protocol configuration is missing.
- E. The static route points to a broadcast interface without a next-hop.
- F. IP CEF is disabled on the remote router.

Answer: B,C

NEW QUESTION: 2

Which two statements are true regarding bidirectional PIM? (Choose two)

- A. Devices only store group specific entries.
- B. It eliminates the need for an RP.
- C. Forwarding paths can be suboptimal
- D. It uses multicast tunneling to forward traffic

Answer: A,C

NEW QUESTION: 3

You need to recommend a procedure to implement the build agent for Project1.

Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Scenario:

Step 1: Sign in to Azure Devops by using an account that is assigned the Administrator service connection security role.

Note: Under Agent Phase, click Deploy Service Fabric Application. Click Docker Settings and then click Configure Docker settings. In Registry Credentials Source, select Azure Resource Manager Service Connection. Then select your Azure subscription.

Step 2: Create a personal access token..

A personal access token or PAT is required so that a machine can join the pool created with the Agent Pools (read, manage) scope.

Step 3: Install and register the Azure Pipelines agent on an Azure virtual machine.

By running a Azure Pipeline agent in the cluster, we make it possible to test any service, regardless of type.
