All newly supplementary updates will be **TMMi-P\_Syll2020 Test Simulator Fee** sent to your mailbox one year long, Do not waste your time in sitting around.

#### **NEW QUESTION: 1**

Refer to the exhibit.

A customer is having problems with NPV. Which of these is the cause of the problem?

- A. No server was requested or received by the FLOGI database.
- B. One external link must be up for server interface to be up.
- C. VSANs are misconfigured on the upstream ports.
- D. VLANs are misconfigured on the upstream ports.
- E. Internal links are down and must be up for the server interface to be up.

**Answer: C**

**NEW QUESTION: 2**

"When a customer deposits cheque with a bank for clearing, the customer becomes a \_\_\_\_\_."

- A. Debtor
- B. Principal
- C. Agent
- D. Creditor

**Answer: B**

**NEW QUESTION: 3**

Ihr Netzwerk enthält eine Active Directory-Domäne mit dem Namen contoso.com. Alle Clientcomputerkonten befinden sich in einer Organisationseinheit mit dem Namen AllComputers. Auf Clientcomputern wird entweder Windows 7 oder Windows 8 ausgeführt.

Sie erstellen ein Gruppenrichtlinienobjekt mit dem Namen GP1. Sie verknüpfen GP1 mit der Organisationseinheit AllComputers. Sie müssen sicherstellen, dass GP1 nur für Computer mit mehr als 8 GB Arbeitsspeicher gilt.

Was solltest du konfigurieren?

- A. Die Sicherheitseinstellungen von AllComputers
- B. Die Sicherheitseinstellungen von GP1
- C. Der WMI-Filter für GP1
- D. Die Block Inheritance Option für AllComputers

**Answer: C**

Explanation:

Erläuterung

Mithilfe von WMI-Filtern (Windows Management Instrumentation) können Sie den Bereich von Gruppenrichtlinienobjekten (Group Policy Objects, GPOs) basierend auf den Attributen des Zielcomputers dynamisch bestimmen.

Wenn ein mit einem WMI-Filter verknüpftes

Gruppenrichtlinienobjekt auf den Zielcomputer angewendet wird,

wird der Filter auf dem Zielcomputer ausgewertet. Wenn der

WMI-Filter false ergibt, wird das Gruppenrichtlinienobjekt

nicht angewendet (außer wenn auf dem Clientcomputer Windows

Server ausgeführt wird. In diesem Fall wird der Filter

ignoriert und das Gruppenrichtlinienobjekt wird immer

angewendet). Wenn der WMI-Filter den Wert true hat, wird das

Gruppenrichtlinienobjekt angewendet. WMI-Filter werden wie GPOs

domänenweise gespeichert. Ein WMI-Filter und das

Gruppenrichtlinienobjekt, mit dem er verknüpft ist, müssen

sich in derselben Domäne befinden.

WMI-Filterung mit GPMC

**NEW QUESTION: 4**

An invoice for \$200 USD and a credit memo for \$225 USD due for payment and the "Apply credits up to zero amount" option is enabled for the payment process request. Which statement is correct?

- A. The payment process request pays only \$200 USD alone.
- B. The payment process request doesn't select the invoice or credit memo for payment because the credit reduces the payment to -\$25 USD, which is below zero.
- C. The payment process request creates a refund for \$225 USD and leaves the invoice unpaid.
- D. The payment process request applies \$200 USD of the credit memo to the invoice, leaving a remaining credit of \$25 USD, and created a payment for \$0 USD.

**Answer: D**

Explanation:

Explanation/Reference:

When you submit a "payment process request", you can enable the Apply credits up to zero amount payment option. Enabling the option causes the payment process to apply credits when the credits reduce the payment amount below zero.

The following scenario illustrate the impact of this option.

Credit Amount Greater Than Invoice Amount

An invoice for 200 USD and a credit memo for 225 USD are due for payment.

The following table describes the payment processing that occurs based on the setting for the Apply credits up to zero amount payment option.

Assume that the "Apply Credits Up to Zero Amount" option is enabled.

Payment processing applies 200 USD of the credit memo to the invoice and creates a payment for 0 USD.

The remaining credit is 25 USD.
