NEW QUESTION: 1
You are creating a SQL Server 2008 Integration Services (SSIS) data flow which moves information to a SQL Server 2008 database for Company.com.
You should make sure that data flow refreshes the existed data in the SQL Server database through utilizing data in your data flow.
Which is the correct answer?
A. You should utilize Dynamic Management View (DMV)
B. You should utilize SQL Server Destination
C. You should utilize Data Conversion Transformation
D. You should utilize OLE DB Destination
Answer: B

NEW QUESTION: 2
You have a lightweight AP that has been moved to a new subnet and has become stranded because DNS and DHCP servers are unavailable. The AP cannot connect to the controller.
When connected to the console port, which three minimum parameters must you configure? (Choose three.)
A. controller name
B. AP hostname
C. AP IP address
D. controller IP address
E. default gateway IP address
F. username and password
Answer: C,D,E
Explanation:

In order to manually configure static information on a LAP
using the AP CLI interface, you can use
these EXEC mode CLI commands:
AP#capwap ap ip address <IP address> <subnet mask>
AP#capwap ap ip default-gateway <IP-address>
AP#capwap ap controller ip address <IP-address>
AP#capwap ap hostname <name>
(optional)
Notice the first 3 are needed for the AP to connect to the
controller; the last step is optional and
not needed for basic connectivity to the controller.

NEW QUESTION: 3
A protection mechanism to limit inferencing of information in
statistical database queries is:
A. Specifying a maximum query set size, but prohibiting the
querying
of all but one of the records in the database
B. Specifying a minimum query set size
C. Specifying a maximum query set size
D. Specifying a minimum query set size, but prohibiting the
querying
of all but one of the records in the database
Answer: D
Explanation:
When querying a database for statistical information,
individually
identifiable information should be protected. Thus, requiring a
minimum size for the query set (greater than one) offers
protection
against gathering information on one individual. However, an
attack
may consist of gathering statistics on a query set size M,
equal to or
greater than the minimum query set size, and then requesting
the
same statistics on a query set size of M + 1. The second query
set
would be designed to include the individual whose information
is
being sought surreptitiously.
*Thus with answer "Specifying a minimum query set size, but
prohibiting the querying of all but one of the records in the
database", this type of attack could not take place.
* Answer "Specifying a minimum query set size" is, therefore,
incorrect since it leaves open the loophole of the M+1 set size
query. Answers "Specifying a maximum query set size" and
"Specifying a maximum query set size, but prohibiting the

querying of all but one of the records in the database" are incorrect since the critical metric is the minimum query set size and not the maximum size. Obviously, the maximum query set size cannot be set to a value less than the minimum set size.

NEW QUESTION: 4

A. Option C
B. Option A
C. Option B
D. Option F
E. Option D
F. Option E
Answer: D,E,F
