Your network contains an Active Directory domain named contoso.com. The domain contains a file server named Server1. Server1 is a BranchCache hosted cache server that is located in a branch office.

The network contains client computers that run either Windows 7 or Windows 8.

For the branch office, all of the user accounts and the client computer accounts are located in an organizational unit (OU)

named Branch1. A Group Policy object (GPO) named GPO1 is linked to Branch 1. GPO1 contains the BranchCache settings. You discover that users in the branch office who have client computers that run Windows 7 do not access cached content from Server1. Users in the branch office who have Windows 8 computers access cached content from Server1. You need to configure the Windows 7 computers to use BranchCache on Server1. Which setting should you configure in GPO1? To answer, select the appropriate setting in the answer area.

**Answer:**
